

```
detail::output_adapter  
_protocol< CharType >
```

The diagram illustrates an inheritance relationship between two C++ classes. At the bottom, a grey box contains the code for `detail::output_string_adapter< CharType, StringType >`. Two blue arrows point upwards from this box to a white box above it, which contains the code for `detail::output_adapter_protocol< CharType >`. This indicates that `detail::output_string_adapter` inherits from `detail::output_adapter_protocol`.

```
detail::output_string  
_adapter< CharType, StringType >
```
